

Thank you for your interest in the BurnSoft BurnPad Application. BurnPad was created for both Technical and Non-Technical Users. It will allow you to Read documents and files from any directory and allow you to edit and save them as well. Originally we were working on a Document Editor/Log view and also a VB Script editor. BurnPad version 2 was a combination of the Document Editor/Log Viewer plus a VB script Editor. So Version 1 of the Document Editor/Log Viewer and version 1 of the VB script Editor never saw production separately.

## Non-Technical Uses:

For the non-technical users, this application will allow you to open and Create Text and Rich Text Format Documents. I know what you are thinking, WordPad and Notepad come free with Windows, why would I need anything else for that use? Well you're right, those applications do come with windows, but those applications do not allow you to work with those documents in one application, so it is less searching on your task bar if you are working with multiple documents. Also, if you have a directory of documents, this application will have the convenience of our file navigation window.

```

Although BurnPad can open the scripts listed above, it will not auto-color the key words for each language, except for VB Scripts.

```

D:\My Documents\WBS\DeleteFiles.vbs
Dim strFile 'Working File
Dim strDateCreated 'Used to get the Last Time a File was modified /Created
Dim strDateOld 'Used to get the value of todaydate minus tthe DaysOld Constant
Dim CurrentFile 'Working File
Dim MyFolderList 'Used to Split the folders in an array
Dim x 'Count Folder List array
Dim strWorkingDir 'Current Working Directory
Dim strDateCount ' To Count files that arex days old. MDstly used for reporting
Dim Days2Old 'Used to Convert the Constant Daysold into a negative
Dim strFileType 'Grab the Array from DayOld
Dim strFileArr 'File Type Array
Dim ArrayFiles 'Array of Files Deleted
Dim SplitArray
Dim strNetIQ

CONST RootDirectory = "c:\winnt\system32\LogFiles"
CONST FileType = "log"
CONST DaysOld = 10
CONST DeleteAllFiles = "n" 'DeleteAllFiles without DateCheck

```

The VB script section is still a work in progress, even though it does color-code most of the words, some words tend to get over looked. There is also a Scripting selection in the Tools menu that will allow you to run this application in wscript or cscript. The cscript output will display in a regular window instead of a DOS screen.

Our VB Script editor is not much right now, compared to other editors, we are still working on it to make it better to compete with the others.

In later versions, we will support color-coding and auto still function for our VB script editor as well as other languages. Also in future releases we plan on having debug and step through features as well.
